# Matrix-Vector Multiplier Chip 

## General Description:

The Matrix-Vector Multiplier Chip will multiply a 3-bit x 3-bit matrix with a 3-bit vector to produce a 6-bit output. This chip utilizes a cellular array of CMOS elements, designed for easy expandability and testability. Each input pin accepts standard CMOS voltage levels. The outputs are also standard CMOS levels. For ease of testing, a sequence generator has also been added, which is accessible in test mode.

## Specifications:

Supply Voltage ..... 5 V
Sink Current ..... ?
Source Current ..... ?
Power Dissipation. ..... ?
Fan Out. ..... ?
Propagation Delay. ..... 10 cycles
Input Low Voltage .....  $0-0.5 \mathrm{~V}$
Input High Voltage ..... 4.5-5.0V
Output Low Voltage. ..... $.0-0.5 \mathrm{~V}$
Output High Voltage ..... 4.5-5.0V

| Clock | 1 | 40 | Vdd |
| :---: | :---: | :---: | :---: |

| NC | 3 | 38 | Y11 |
| A1 | 4 | 37 | Y10 |
| A2 | 5 | 36 | Y21 |
| A3 | 6 | 35 | Y20 |
| NC | 7 | 34 | Y31 |
| B1 | 8 | 33 | Y30 |
| B2 | 9 | 32 | NC |
| B3 | 10 | 31 | T1 |
| NC | 11 | 30 | T2 |
| C1 | 12 | 29 | T3 |
| C2 | 13 | 28 | T4 |
| C3 | 14 | 27 | T5 |
| NC | 15 | 26 | NC |
| X1 | 16 | 25 | TC1 |
| X2 | 17 | 24 | TC2 |
| X3 | 18 | 23 | TC3 |
| NC | 19 | 22 | TC4 |
| Gnd | 20 | 21 | TC5 |

The clock pin is for a user-supplied clock input. Mode pin is 0 for normal operation and 1 for self-test operation. A1-3, B1-3, and C1-3 correspond to the inputs for the $1^{\text {st }}, 2^{\text {nd }}$, and $3^{\text {rd }}$ rows of the input matrix respectively. Pins X1X3 correspond to the input vector. Y11 and Y10 are the bits of the $1^{\text {st }}$ element of the output vector; likewise for Y21-Y20 and Y31-Y30. T1T5 are active only in test mode. They are the outputs of each processor cell and pins TC1-TC5 are the carry bits from the processor cells.

## Sample Operation

Mathematical representation of the chip's function:

$$
\left[\begin{array}{ccc}
\mathrm{A} 1 & \mathrm{~A} 2 & \mathrm{~A} 3 \\
\mathrm{~B} 1 & \mathrm{~B} 2 & \mathrm{~B} 3 \\
\mathrm{C} 1 & \mathrm{C} 2 & \mathrm{C} 3
\end{array}\right]\left[\begin{array}{l}
\mathrm{X} 1 \\
\mathrm{X} 2 \\
\mathrm{X} 3
\end{array}\right]=\left[\begin{array}{cc}
\mathrm{Y} 11 & \mathrm{Y} 10 \\
\mathrm{Y} 21 & \mathrm{Y} 20 \\
\mathrm{Y} 31 & \mathrm{Y} 30
\end{array}\right]
$$

A full truth table would be too large to include, but a couple examples are given:

## Example 1:

$$
\left[\begin{array}{lll}
1 & 1 & 0 \\
0 & 0 & 1 \\
1 & 1 & 1
\end{array}\right]\left[\begin{array}{l}
1 \\
0 \\
0
\end{array}\right]=\left[\begin{array}{l}
01 \\
00 \\
01
\end{array}\right]
$$

## Example 2:

$$
\left[\begin{array}{lll}
1 & 1 & 1 \\
0 & 0 & 1 \\
1 & 0 & 1
\end{array}\right]\left[\begin{array}{l}
1 \\
1 \\
0
\end{array}\right]=\left[\begin{array}{l}
10 \\
00 \\
01
\end{array}\right]
$$

The truth table for these two examples would look like this:

| A1 | A2 | A3 | B1 | B2 | B3 | C1 | C2 | C3 | X1 | X2 | X3 | Y11 | Y10 | Y21 | Y20 | Y31 | Y30 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 1 | 0 | 0 | 0 | 1 | 1 | 1 | 1 | 1 | 0 | 0 | 0 | 1 | 0 | 0 | 0 | 1 |
| 1 | 1 | 1 | 0 | 0 | 1 | 1 | 0 | 1 | 1 | 1 | 0 | 1 | 0 | 0 | 0 | 0 | 1 |
