

Ross,

Omron has made a business decision to decline all UWB academic requests. I'm told this decision is being given consistently to all requests from academia (the same response was given to MIT today). Detailed specifications are obtained from our close collaborations with partners, the industry alliance, and of our know-how. I'm told you can get high level specifications from the website link below and that it should be adequate to get started. Thank you for your interest in Omron's product's. We regret not being able to help with this request.
